

Cockroach Treatment

In order for our company to provide the most effective service possible, we ask that before our arrival you review and complete the necessary preparations listed below. With doing so, your Technician is able to provide an effective and safe treatment.

How To Prepare For The Service

Kitchen

- ▶ Please provide access to the back of all pantries, cabinets, and drawers.
- ▶ Clear and clean off all countertops.
- ▶ Place all food items in sealed containers.
- ▶ Remove all items from underneath the sink.
- ▶ Please remove any competing food sources and spills from the areas listed above.
- ▶ Ensure to keep all removed items within the kitchen area to prevent cockroaches from spreading to other locations throughout your living space.

Bathroom(s)

- ▶ Please provide access to the closets if experiencing cockroach issues or any signs of activity. Clothes hanging on hangers may be left in the closets.

Reminder

If only bait is used:

- ▶ It is not necessary for you or your pets to leave your home before, during or after the bait treatment. You may notice higher activity right after the treatment for 1-2 days. This is due to the cockroaches coming out of their harborage areas to feed on the bait. Please be patient. The bait will reduce the cockroach activity to low levels within approximately 2-4 weeks leading to elimination.

All treatments will be performed with your health and safety as a main priority.
